Barbara,

The short answer is- to early to tell. For human health risk, its probably OK w/o soil removal. For ecological risk, additional sampling (toxicity tested) will be needed and a full eco risk assessment. If the tox test comes back positive, then some hot-spot removals may be needed - or maybe not???

Let me know if you want to discuss this.

---

Gary,

Is there going to be any removal of the soil for any proposed removal action to be done by the PRPs in order to get construction completion?
